The new SNAP buckle flat 25 electrified combines the innovative FIDLOCK fasteners with electronics for your future-oriented products.

The buckle is capable of detecting whether it is open or closed and shows the desired colour. The built-in digital LED can be controlled independently of the buckle's state (open or closed), and it can shine in the whole RGB colour spectrum. The output signal is also digital (0V/5V) and shows the state of the buckle. The SNAP buckle flat 25 electrified is generally waterproof and available in two basic circuit layouts - Closed Closed (CC) and Closed Open (CO) - the latter being suitable for safety applications. The logo carrier is made of a special translucent black plastic. It features a discreet look if not lit up, but it transmits light when lit from behind. The buckle doesn't transfer current from one side to the other. It is designed as a digital switch, not as a physical one.

Sectors: Mobility, workwear, apparel, smart clothes, bags, safety applications (e.g. airbags)

#### Article information

The basic article number is F8043 - an individual offer is required to determine the cable lengths and configurations.

We offer the following delivery variants for the product: complete / male and female part separated / buckle and cable end separated if a plug is used / everything separated.

#### Customization

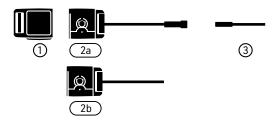

The cable length is fully customizable, and cable end tinning is available. Additionally, we offer custom lengths of cable ends without cable sheathing. Customers can choose between a simple cable or a waterproof plug. The logo plate (logo carrier) can feature custom prints or moulded logos.

# Individual parts for individual transport logistics:

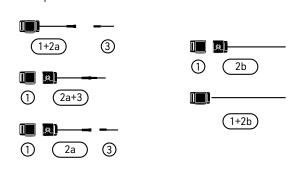

All parts to one location:

It's possible to send all four parts to separate locations. You can also combine the parts:

#### Examples for combinations:

# **Buckle properties**

Materials: PA66GF, PC (Not compliant with Fidlock RSL)

Storage & Operation Temperature:  $-20^{\circ}\text{C} \sim +60^{\circ}\text{C}$  (95% humidity)

Static breaking load: 380N

Webbing width: 25mm

Colour: black REACH, RoHS

#### LED - WS2812B

- > Manufacturer: Worldsemi (link to product http://www.world-semi.com/Certifications/WS2812B.html)
- Easy to use (also for beginners) with libraries from Adafruit (Adafruit NeoPixel Library (<a href="https://github.com/adafruit/Adafruit NeoPixel">https://github.com/adafruit/Adafruit NeoPixel</a>) or fastled.io (<a href="https://fastled.io/">https://fastled.io/</a>))

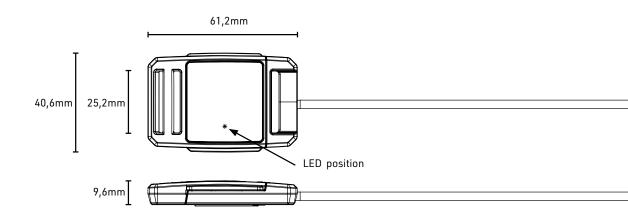

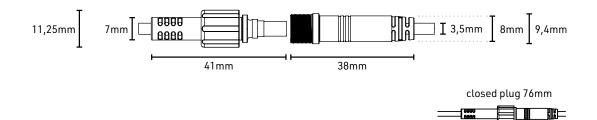

- > Input voltage: +3,5V ~ +5,3V DC
- > Operation current (for each LED): 12mA
- Wave lengths: red (621nm), green (520nm), blue (471nm)

#### Reed Switch - MKA10110

Manufacturer: MKA

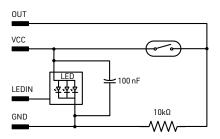

- > Operation current 500mA
- > Power 10W

# Buckle Closed Closed (CC)

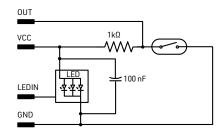

When the buckle is closed, the circuit is closed (5V, high)

Without the magnet for the reed switch, the circuit is normally open (no) – pull-up resistor setup

# Buckle Closed Open (CO)

When the buckle is closed, the circuit is open (0V, low) – suitable  ${\bf for}$  safety applications

Without the magnet for the reed switch, the circuit is normally closed (nc) – pull-down resistor setup

# Cable properties

AWG size: 28

Resistance:  $\sim$  0,223  $\Omega/m$  at 20°C, 68°F Minimum bending radius:  $\sim$ 25mm Materials: copper, TPE, nylon

Colour: black RoHS, halogen free

# Cable pinout

OUT	$\rightarrow$	yellow	
VCC	$\rightarrow$	red	
LEDIN	$\rightarrow$	white	
GND	$\rightarrow$	hlack	

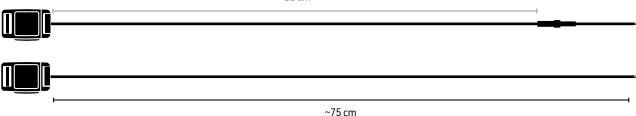

#### Samples and in stock products

The CO variant in the length of 75cm with and without a connector is on stock available. The connector is a waterproof connector that can be securely connected through a nut.

#### SNAP Buckle flat 25 electrified - 75cm

Available in CO version with and without connector. (CC version ready for production)

~56 cm
